Multi Residential Development Lighting

STK Apartments St Kilda, VIC

*Continually improving
your lighting experience*

Opportunity

STK Apartments is a luxurious 250+ 1 & 2 bedroom residence over 26 floors, with a sleek design style that is truly exquisite. Aglo Systems worked with both Caydon Property Group and Vast Electrical after winning the electrical works and lighting supply tender due to competitive pricing and ability to source a wide range of fittings.

Solution

The lighting range supplied and installed was extensive, with most being customised or sourced specifically for this project. They included a distinct chandelier in the foyer; pendants in the outdoor meeting space and gymnasium/swimming pool complex; custom built light boxes in garden surrounds; track mounted spotlights in the art gallery area; downlights, oysters and wall lights throughout all apartments and an office fit out with recessed T-bar troffers. The lighting complemented the modern, rich appointments throughout the prestigious apartment building.

The project took over two years from start to finish and Aglo Systems was able to meet the challenging tight deadlines, hold ordered stock and deliver in multiple stages, floor by floor as required.
