Pendant Rejuvenation

Saint Stephens Church Reservoir, VIC

Church refurbishment upcycles pendants to give new life to old light fittings in a cost effective way.

*Continually improving
your lighting experience*

Opportunity

Aglo Systems' Custom Manufacturing team worked with 2B Designed Architects for this tight budget, quick turn around job at Saint Stephens Catholic Church in Reservoir, VIC. As part of the renovation for the interior of the church, a method of modernising the 8 existing pendants was required.

Solution

For the refurbishment, each fitting was gently dismantled, cleaned and repainted. The design brief included reimagining the existing plain acrylic diffusers to echo the stained glass panels in the chapel. Unfortunately, the Church budget could not accommodate for hand made stained glass diffusers, thus a cost effective solution was proposed. The result involved photographing the actual stained glass panels and printing the image onto clear adhesive vinyl which was wrapped around the cleaned acrylic diffuser of the pendant. The internal fittings were also upgraded in process from fluorescent tubes to an LED light source.

The final modernised pendants match the stained glass windows beautifully and look convincingly authentic. The production from purchase order to delivery was completed in one month.
