

Project Management

Target Australia Head Office 'Value Management' Case Study

Aglo Systems manage commercial lighting solutions for retail chain rollouts, offices, multi-residential developments, supermarkets, schools, hospitality venues and hotels. Our experience allows us to source, handle and supply the best products for your project with guaranteed quality and innovative design, while keeping a strong focus on value management.

Our capabilities include:

- Ability to source and supply alternative light fittings which meet the specified design and performance intent and budget
- Inhouse lighting designers
- Inhouse R&D and strict quality control measures
- A global supplier network
- Warehouses and assembly capacity in China and Australia for shorter lead times, greater flexibility and competitive pricing
- Sales offices in Vic, NSW & Qld

Value Management and Product Enhancement Case Study

Target Australia Head Office

Williams Landing, Vic

This large -scale commercial building project developed by Cedarwoods involves 12,000m² of office space. Aglo's special project team worked in combination with the client's engineers W&G, Hacer and ASI Electrics to provide light fittings for the four levels of open floor office space, meeting rooms, kitchens and corridors.

Our initial brief was to provide an alternative office troffer that suited budget requirements. It was to meet the original design intent and technical features of the specified leading-brand fitting, with a high efficiency, 90CRI, and low glare rating.

We proposed the Mondulux Vivaldi troffer, which was then rigorously tested by W&G to compare against the specified troffer. To meet the lumen efficiency of the specified fitting, our R&D team enhanced Vivaldi's reflector with a new material and design.

During this six-month examination and product development process, Aglo were required to run a series of additional specific LM79 and photometric performance tests and provide reports and compliance certifications to the client. Several options for other types of luminaires and lighting layouts were also requested to be investigated and compared. In due course, the enhanced Vivaldi, with our carefully calculated lighting design plans passed the comparison criteria and was approved for procurement. Our project management team then arranged the staged delivery of the product over a four-month period.

Aglo Systems also supplied numerous Mondulux and Aglo Systems branded alternative light fittings for this project:

- Impact 7532 recessed extrusion
- Linea LED strip
- Mozart LED Panels
- Downlights
- Lowbays
- Monaco Battens
