

Capabilities & Services

Company Profile

Aglo Systems is a leading supplier of commercial project lighting solutions and custom manufactured architectural features within the Australian market.

Established in 2004, we have earned a solid reputation from providing high quality products, technical expertise and personalised service.

The core of our business is our growing team of inhouse specialists in lighting design, industrial design, mechanical engineering, electrical engineering, project management, procurement and sales.

With end-to-end project management, from light planning to installation, our aim is to simplify the lighting procurement process and 'continually improve your lighting experience'.

Accreditations

■ Our Services

Bespoke Architectural Features

We create unique and complex architectural features, such as decorative wall screens, door handles and shades.

Custom Lighting Solutions

We produce bespoke light fittings for large developments including shopping centres, casinos, hotels, luxury apartments and public spaces.

Commercial Lighting Supply

As commercial lighting solution experts, our team can assist you with any project whether it be small and complex or large and dynamic, there is no limit to our capabilities. With retail being a main focus, we have become experts on ensuring optimal lighting is delivered every time.

Lighting Design

Our lighting design team create lighting concepts and solutions to achieve an exceptional lighting experience which is both energy efficient and compliant.

Energy Efficient Lighting Upgrades

For lighting upgrades, our team specialises in reducing your power usage and maintenance costs while improving the light quality with a tailored solution that leverages government rebates.

Project Management

Providing quality lighting packages to suit architectural design and technical specifications, our project specialists ensure all requirements are met, with a strong focus on timely delivery and value management.

Photometrics Lab

The LabSpion Goniophotometer is a key investment initiative to ensure lights and products supplied are all correctly specified to their designed light output beam angle and light quality colour rendering index (CRI). Incorrectly specified and manufactured lights are a resource waste. Aglo's environmental policy is to use fewer lights, correctly specified and QA tested. QA also involves in-house thermal testing and ageing testing.

Target Bourke St, Melbourne CBD

Retail Lighting

Aglo Systems has a proven track record working with many leading retailers, shopfitters, architects, designers, builders and electrical contractors.

As specialists in the retail industry, we understand the unique requirements in illuminating window displays, POS pieces, shelving, counters, gondolas and fitting rooms. We provide a seamless service from planning your lighting design and fitting specifications to delivery.

- Retail lighting specialists
- Inhouse lighting design service with J6 BCA compliance calculations
- 1 to 2 week product lead time

Energy Efficient Lighting Upgrades

By upgrading your lighting with energy-efficient LED fittings, you can significantly reduce maintenance costs and achieve up to 70% annual energy savings, with payback periods as short as 18 months. A lighting upgrade will improve the lighting quality and can also provide positive health effects. For retailers, a lighting upgrade better highlights your product offering and enhances the customer experience which leads to increased sales.

Our upgrade solutions provide you with the latest technologies and highest efficiencies, whilst ensuring both products and installation meet Australian Standards. Sites in New South Wales and Victoria may be eligible for Government rebates for lighting upgrades. Aglo can manage end-to-end project design and delivery, including the rebate process, to ensure that you receive the maximum discount possible. Our upgrade projects range from retail, office, educational, healthcare and aged care facilities - ask us for a site assessment.

- Save up to 70% on energy bills
- Save on maintenance costs
- Improve lighting quality

Completed Lighting Upgrade Projects:

Australian Red Cross Blood Donor Service	House
Baby Bunting	Monash Aquatic Centre
Best & Less	Mountain Designs
Bras N Things	Optus
Country Road	Robins Kitchen
DB Schenker	Witchery

■ Lighting Design

A well-lit site can make a vast impact on the overall user experience. It is not just about visual comfort but also how each area can be enhanced by lighting, to make it inspiring, emotive or engaging. Well planned lighting drives sales and improves OH&S.

Lighting design is both a science and an artform. Aglo Systems' lighting designers will collaborate with your architects and/or interior designers to create a brief covering the lighting requirements and design intent. They will also discuss the desired ambience and working environment to gain a full understanding of the type of space before designing the lighting plan.

We can provide out-of-the-box concepts to achieve desired outcomes: from an even and balanced illumination across the

site, to using lighting for emphasis and decoration. We aim for an optimum illumination for the lowest power consumption that meets the design brief and regulations.

The requirements for energy efficient lighting design are covered by section J6 of the Building Code of Australia, which defines a maximum wattage per square metre for specific lighting tasks. The Australian Standards provide recommended illumination levels for particular spaces.

As part of the lighting design process, we provide comprehensive reports and visuals to illustrate the proposed lighting effect. We calculate the expected light output and distribution and prove that the design complies with BCA regulations and Australian Standards.

Photometrics Lab

Aglo Photometrics provides the possibility of measuring virtually any type of lighting fixture fast and easily without being dependent on external testing.

The LabSpion Goniophotometer is a key investment initiative to ensure lights and products supplied are all correctly specified to their designed light output beam and light quality colour rendering index (CRI). Incorrectly specified and manufactured lights are a resource waste, so too is not using the correct number of luminaries. Aglo's environmental policy is to use fewer lights, correctly specified and QA tested. QA also involves thermal and age testing within the Aglo Photometrics lab for consistency in shape of beam, colour intensity and quality.

MONDOLUX™

Mondolux is a new, innovative lighting brand developed by Aglo Systems. Through decades of combined work in the lighting industry, we understand the needs of the market and identified a gap in the current offering of lighting companies.

We know the challenges in specifying high-performance LED luminaires and have developed a comprehensive product range specifically suited to commercial and retail applications. All products are thoroughly tested, warranted and certified to meet Australian, New Zealand and European compliance standards.

Aiming to 'Continually improve our clients' lighting experience', we use the latest lighting technology and deliver on short lead times with products assembled and stocked in Australia.

The Mondolux website features a multitude of technical information for specifiers and lighting designers. It offers a platform with downloadable resources and a product configurator that makes sourcing the perfect lighting solution simple.
